

Sporting Shooters' Association of Australia Inc

The Complete SSAA Farmer Assist Program Booklet

The following booklet outlines the features of the SSAA Farmer Assist program. This booklet gives an overview of the program, its proficiency requirements, and its Code of Practice. The booklet also introduces the concept of Property-Based Wildlife Management Plans. These plans enable both SSAA members and farmers to design an integrated management program that will help manage wildlife issues.

SSAA Farmer Assist - Assessment Target	27

The Sporting Shooters' Association of Australia

Who we are

The Sporting Shooters' Association of Australia (SSAA) was established in 1948 to promote the shooting sports and protect firearm owners' interests. Some 60 years later, these roles remain the same and with more than 212,000 members across our state and territories, the Association has certainly become Australia's premier shooting organisation, representing licensed firearms owners, sporting shooters and recreational hunters.

The SSAA has official Non-Government Organisation status within the United Nations and regularly participates in international discussions. It works to communicate with Government at all levels and maintain working relationships with Australia's elected leaders and those departments that affect our chosen sport. Supporting those groups who support our recreation and vigorously refuting the myth-making and factually incorrect claims of anti-firearms groups is very important to the Association. As such, the SSAA's research department coordinates research projects and initiatives and gathers data from a range of sources. All of this provides material for our magazines and publications and has run-on benefits for our members.

What we stand for

The aims and objectives of the SSAA as an organisation are:

- to promote and improve the role of the sporting shooter in Australia
- to help educate young people in the skills of hunting, shooting and the proper care and safe handling of firearms
- to encourage all hunters to abide by a strict code of ethics
- to work for a better understanding between the landholder and the member
- to actively advocate game conservation and assist appropriate authorities in game management programs, and
- to act as an effective and credible voice, representing all Australian shooters to the public, community leaders and authorities.

Our code of ethics outlines the individual member's ethical responsibilities to the association and the community at large. The code of ethics includes:

- an obligation to obey the rules of safe firearm handling and insisting others do the same
- an obligation to obey all relevant game laws and regulations
- a requirement to acquire marksmanship and hunting skills to ensure clean harvesting of game and dispatching of feral animals
- a requirement to support game conservation programs, and
- to pass on to youngsters the proper attitudes to game and conservation management as well as safe firearm ownership which are the hallmark of the sporting shooter.

What we do

The SSAA promotes a large array of target shooting disciplines. We continue to promote and sponsor world championship events. Most target shooting disciplines enable our members to develop the skills required to improve their marksmanship in the field. A variety of target shooting disciplines also allow the whole family, from grandchildren to grandparents, an opportunity to participate together in a single recreational activity. This is one of the key factors that makes target shooting a family-friendly activity. Target shooting can certainly be an entertaining family affair that requires varying levels of physical exertion and mental concentration in a very safe environment. Target shooting enables people who may suffer a physical limitation to participate with able-bodied friends or family in the same event.

The SSAA Media and Publications department produces a number of high-quality publications for sporting shooters of all persuasions. The monthly *Australia Shooter* is the Association's flagship magazine, providing an entertaining and informative read appealing to all firearm owners. The quarterly *Australian Hunter* is Australia's favourite hunting magazine which is intended to create a better environment and community understanding of all forms of hunting. The *Australian and New Zealand Handgun* is an annual magazine catering to revolver and pistol shooters, as well as the security industry and law enforcement agencies. There is also a range of periodical publications including the *ASJ: The political voice of the SSAA*, *The Junior Shooter* and the *Australian Women's Shooter*.

The SSAA Media and Publications department also produces books such the award-winning game meat cookbook series *SSAA's Cooks Companion*, *Field to Fork: The Australian Game Cookbook* and *Field to Fork: Second Helpings*. *A Journalist's Guide to Firearms and the Shooting*

Sports was created to provide information about firearms, the shooting sports and recreational hunting to assist media outlets to delivery accurate information. SSAA's *Comprehensive Guide to Shooting and Hunting in Australia* provides an introduction to the SSAA, firearms, the shooting sports and hunting in Australia.

The SSAA makes extensive use of the internet to keep members, firearm owners and supporters informed of developments within the SSAA as well as legislative changes, media reports, industry news and general matters of interest. The SSAA Media and Publications department produces regular e-newsletters to members who subscribe to this service.

We have you covered

All financial members of the SSAA are covered by our public liability and personal accident cover.

The SSAA's Public Liability policy provides protection for members who are held legally liable for property damage or bodily injury to third parties due to their negligence while engaging in any lawful recreational shooting activities. This cover also includes bow hunting or target archery (except where such activities require the membership of another shooting association). The limit of liability is \$20 million for any one claim.

The Group Personal Accident policy covers members while they are participating in club, state or national events (including shooting, hunting, conservation and other activities authorised by the SSAA) as well as any lawful recreational shooting or hunting by members. The maximum weekly benefit claimable under this policy is \$750 for a 104-week benefit period (excluded period of 7 days apply). There is also the option for SSAA members to upgrade their income protection for a \$15 annual fee to raise the weekly benefit to \$2000 per week over a 104-week period (excluded period of 7 days apply).

Firearms professionals such as pest controllers and firearms trainers have the option to take out their own personal accident policy under SSAA Insurance Brokers. This policy can be fully customised to income and other factors.

For full policy conditions and exclusions of the policies mentioned, it is recommended that interested persons contact SSAA Insurance Brokers who will be able to assist with any enquiry.

Property owners and managers should look after their interests and by allowing insured private hunters such as SSAA members onto their land, they should feel the peace of mind knowing that they are covered against any potential property damage and bodily injury legal matters. This is certainly one thing that property owners and managers don't need to worry about.

SSAA Farmer Assist Program

Vision

To create relationships between the farming community and individual SSAA members that will provide ongoing benefits to all parties.

Mission

To enable farmers to concentrate on maximising the profitability and sustainability of their enterprises by allowing ethical and responsible hunters the opportunity to assist in introduced and native wildlife management.

Objectives

- Develop relationships between the farming community, the SSAA and its members.
- Provide assistance to farmers by undertaking wildlife management activities.
- Increase the awareness of ordinary city-based SSAA members to life on the land.
- Increase member opportunities to hunt on private property.
- Increase public perception that hunting is one of many practical tools available for use in introduced and native wildlife management.
- Reduce the impact of overabundant introduced and native wildlife on both farmland and the Australian natural landscape while helping increase profitability and biodiversity.
- Provide opportunities to gather data that may be valuable to assist in future wildlife management activities and programs.

Program Overview

The SSAA Farmer Assist Program proposes to help establish ongoing relationships between the farming community, the Sporting Shooters' Association of Australia Inc (SSAA National) and its members. These relationships will provide the farming community access to genuine, skilled and responsible people, who are willing to engage in culling/shooting activities on behalf of the landholder or manager. The main aim is to create stronger bonds between the SSAA and the farming community to help manage overabundant wildlife responsibly.

The program will enable SSAA members the opportunity to assist beyond simply introduced and native wildlife management. Members may also be able to assist farmers by keeping a watchful eye of the property while undertaking shooting activities by reporting anything that they believe is of interest or concern to the farmer. The program aims to help reintroduce and reattach city-based members to the land and develop country connections. It also provides an opportunity for farmers to meet new people and help create a foundation for a beneficial long-term relationship.

The program is designed to benefit three key groups. Firstly, farmers and land managers will have the opportunity to reassign some of the time and resources spent (or missed) on introduced and native wildlife management activities, where it's better spent to increase the efficiency and profitability of their businesses.

Secondly, the SSAA members will benefit from building relationships with landowners and managers that will lead to participating in activities that they enjoy.

Thirdly and finally, the program will benefit the Australian environment, where SSAA members will be proud to do their part to assist in the management of both introduced and native wildlife, which can cause negative impacts to our unique natural environment and rural economies.

Key Features in the Development of the Program

One of the key features of the program will be the creation of the SSAA Farmer Assist Jobs Board (Jobs Board). The Jobs Board will act as an online interface to link SSAA members ready to answer a call for help to farmers requiring assistance with a wildlife issue.

The Jobs Board will enable farmers in a particular state or territory region to describe their needs and expectations. Members who can fulfil the advertised needs and expectations can then respond and offer their services. Farmers will then be able to contact and discuss the task with the members who have responded to their listing on the Jobs Board. The farmer then selects a member/s to come out and do the job.

SSAA National will promote the program within its membership, farming groups and other relevant stakeholders. A simple registration process has been developed so both members and farmers can easily gain full access the SSAA Farmer Assist program and Jobs Board.

All SSAA members that participate in the program will be covered under SSAA National's \$20 Million Public Liability Policy. This is another key feature of the program, which will provide farmers with peace of mind, in that, they will know that any SSAA members invited onto their property as part of this program will be covered by SSAA National's Insurance Policy.

To maintain SSAA National's commitment to safety and ethical hunting, all members who register for the program are required to follow the SSAA Farmer Assist Participant Requirements and Code of Practice. Farmers will be requested to report any unacceptable behaviour so action can be taken against anyone whose acts are contrary to the spirit of the program.

Data Collection and Feedback

This program will provide an opportunity to collect data and feedback from stakeholders to help shape future projects and activities. Data such as measurements of relative or absolute abundance of a problem species, their harvest levels, increases in lambing/calf percentage rates and a decline in related economic and environmental impacts, will help show the effectiveness of program activities over time. This will also assist in decision making regarding what (or if any) additional wildlife management measures need to be taken.

Apart from farmers advising SSAA National of any inappropriate behaviour, their views on how the program can be enhanced will be valued. Feedback forms will be available for those who wish to take the time to review the program periodically. Any feedback will be used to assess the program against its objectives and cultivate improvements for the benefit of future program expansions.

Program Implementation

SSAA National's Matthew Godson is the driving force behind the planning, development and management of this program. SSAA National welcomes collaboration from farming and pest management stakeholder groups to help promote the program to farmers.

Collaborating partners can also assist in the development and promotion of the program within their membership bases. Ideas that add value to the stated objectives will always be appreciated.

SSAA National Farmer Assist Program Manager Matthew Godson can be contacted by phone on 08 7099 6431 or email farmerassist@ssaa.org.au to discuss any issue regarding the program and/or its promotion.

Participant Requirements and Code of Practice

Shooting as a pest control method is often wrongly criticised as cruel and inhumane by those opposed to or unfamiliar with firearms, firearm ownership and hunting activities. This view is usually based on ideology, misinformation or a lack of knowledge. Although shooting can be seen as a visually confronting process to some (ie, it involves the sight of blood), this does not mean that the shooting of an animal is indeed cruel or inhumane.

A model for assessing the relative humaneness of pest animal control methods, developed in conjunction with the RSPCA and Australian Government, highlights that shooting has the lowest overall welfare impact when compared to other management tools.

Ethical hunting, as promoted by SSAA National, ensures that animals are killed in a way that rapid death is achieved and the potential for unnecessary pain and suffering is minimised. This conduct therefore eliminates any claim or action of cruelty.

To become a participant of the SSAA Farmer Assist program, members will need to display a competent level of proficiency in firearm use. This requirement will demonstrate an appropriate level of marksmanship equivalent to commercial macropod harvesters (professional shooters). This will counter claims by various groups that control activities should only be done by professional or paid operators. The reluctance in certain parts of the community to endorse the use of any person other than a professional is purely based on perceived animal welfare concerns. Unfortunately, paying someone to do a job doesn't necessarily mean you always get the best outcome. The skill requirements for this program will hopefully go a long way to address this issue and will help eliminate such perceptions.

SSAA National believes that animal welfare concerns are appropriately addressed in the SSAA Farmer Assist program through the individual member's obligation to obtain the proficiency requirements and adhere to a dedicated Code of Practice. Codes of Practice are common instruments used by many industries to address and overcome animal welfare concerns. These requirements will ensure that SSAA members can display the necessary skills and knowledge to perform the task at hand in a publicly acceptable manner with high regard to animal welfare.

Firearm Proficiency Requirements

The principles of ethical hunting dictate that a hunter should make every effort to get as close as possible to the intended target and depending on circumstances, shoot from a stable supported position. A supported position involves using aids such as bipods and vehicle-mounted shooting rests, fence posts or natural objects such as trees, branches and ground-based objects.

To display the necessary marksmanship skill level to participate in this program, SSAA members will need to shoot a five-shot group within the assessment zone of the 'SSAA Farmer Assist Assessment Target' at a SSAA range. Once a member has successfully demonstrated the required marksmanship, a range officer from the range must sign-off the target. The signed target must be kept by the member and available for display to the farmer on request.

- *Rimfire assessment must be conducted at a minimum range of 50m.*
- *Centrefire assessment must be conducted at a minimum range of 100m.*

Members are able to choose their most favoured shooting position for the assessment task (excluding a fully supported benchrest position).

Code of Practice

All activities under the SSAA Farmer Assist program must comply with the following Code of Practice. Any breaches may result in exclusion from the program.

Firearm Safety

All participants are required to follow safe firearm handling practices at all times.

Safe firearm handling practices include:

- Treat every firearm with the respect due a loaded firearm.
- Carry only empty firearms, taken down or with the action open, into the car, camp and home.
- Ensure that the barrel and action are clear of obstructions.
- Always carry a firearm so you can control the direction of the muzzle.
- Never point a firearm at anything you do not want to shoot.
- Never leave your firearm unattended unless you unload it first.
- Never climb a tree or a fence with a loaded firearm.
- Never shoot at a flat, hard surface or the surface of water.
- Do not mix gunpowder and alcohol.

Laws, Regulations and Permits

All participants must follow and adhere to all relevant state firearm and hunting regulations.

This also includes national guidelines such as the *National Code of Practice for the Humane Shooting of Kangaroos and Wallabies for Non-Commercial Purposes*.

If protected species require management, farmers must have valid pest mitigation or destruction permits from the appropriate state government agency approving such actions.

Permission to Hunt

All participants are required to gain permission prior to access, and hunt only on private land in which they are required and have approval to conduct their activities.

Biosecurity

Biosecurity is everyone's responsibility. Before entering and leaving agricultural properties ensure vehicles, equipment, clothing and footwear are clean and free from pests and diseases. All participants are required to follow landholder instructions to mitigate any risks on or off the property.

Identifying the Target

Under no circumstances should a shot be taken until the target animal is clearly seen and identified, and that any shot taken poses no discernible risk to person or property.

Animal Welfare

No unnecessary pain or suffering should be inflicted on any animal being hunted or culled. There is an obligation to achieve a rapid humane death. A rapid humane death can be achieved by:

- Targeting the animal in a way to achieve a humane kill (ie, shot placement into the head or chest kill zone).
- A shot must be taken within the recommended kill range of the firearm and ammunition being used.
- The firearm and ammunition choice must be sufficient for the size of targeted animal to achieve a humane kill.
- If a lactating female is killed, participants must make every effort to locate and kill any dependent young as quickly and humanely as possible.

- If an animal is wounded, participants must make every effort to locate and kill the animal as quickly and humanely as possible.

Use of Dogs

If permission is granted by the landowner or manager, dogs may be used to assist in the location of target animals.

The use of any dogs must not contravene any state or territory Prevention of Cruelty to Animals laws.

Humane Hunting Principles and Proper Shot Placement

When hunting with firearms, there are two primary areas where a shot should be placed: the head kill zone and the chest kill zone. These areas accommodate vital organs and major blood vessels, which, when damaged by projectile impact, achieve a rapid humane death.

Projectiles from firearms kill in a number of ways. Projectile impact causes direct physical damage to bone and soft tissue. Projectile impact disrupts blood flow to vital organs such as the brain and also transmits damaging concussive kinetic energy into the targeted animal.

It is accepted that the concussive energy released on projectile impact into the head kill zone will instantly render an animal unconscious while achieving fatal tissue and bone damage, and severe bleeding. This produces no pain and suffering to the animal, thus achieving a very humane rapid death.

Projectile impact into the chest kill zone will render the animal unconscious immediately or shortly after. Hydrostatic shock waves created by the kinetic energy released at the time of projectile impact have the ability to cause an instant fatal stroke. This is due to a massive surge in blood pressure that damages sensitive blood vessels inside the brain. Death is mainly achieved through massive systemic blood loss, which rapidly deprives the brain of blood causing rapid unconsciousness and insensibility and this too achieves a rapid humane death.

In most situations, the preferred shot placement is the chest kill zone. The chest kill zone provides a much larger target area than the head kill zone, which reduces the likelihood of wounding. Animal movement is unpredictable and any sudden head movement coinciding with the time of trigger pull may cause an undesirable result, such as a severe facial injury, which may lead to a slow painful death if the animal is unable to be located and killed with a quick follow-up shot.

The Chest Kill Zone

- *Side view:* When you are positioned to take a shot from side-on, the key aiming point for the chest kill zone area is located in the middle of the chest just behind the shoulder joint of the animal. This area is large and contains vital organs such as the lungs and heart.
- *Front view:* When you are positioned to take a shot from front-on, the key aiming point is found in the area at the base of the neck central to the legs.

- *Quartering*: When you are positioned diagonally behind an animal, your aiming point should be positioned where shot placement transects the heart and the animal's far shoulder.

The Head Kill Zone

- *Side view*: When you are positioned to take a shot from side-on, the key aiming point for shot placement into the head kill zone is the base of the ear.
- *Front view*: When you are positioned to take a shot from front-on, shot placement depends on the angle of the animal's head. Where the animal's head is angled down towards the ground, the key point of aim is located at the intersection point of two imaginary lines drawn from each eye to the opposite ear.

When you are positioned to take a shot at an animal looking directly in your direction, the point of aim should be just above the centre of the nostrils.

Figure 1: Illustrations displaying the kill zone areas on several problem species.

Wounded Animals

Ethical hunters must ensure that any unintentional wounded animal is quickly located and all efforts are made to follow up the initial shot with a quick kill shot to minimise any pain and suffering.

If an animal is unintentionally wounded and remains conscious, after either collapsing on the spot or running a short distance prior to collapse, it is the responsibility of the hunter to follow up the failed attempt by promptly placing a second shot into the head kill zone. A quick second shot reduces any likelihood of further stress to the animal.

If an animal is unintentionally wounded and has run off, it is the responsibility of the hunter to follow up the failed attempt by locating and promptly placing a further shot or shots into the chest kill zone to sufficiently kill the animal outright.

Property Based Wildlife Management Plans

The key to developing a good working relationship between farmers and SSAA members is to clearly state the objectives and desired outcomes of the relationship upfront. The SSAA Farmer Assist Program can be the starting point for the development of a simple Property Based Wildlife Management Plan between all parties to enable the development of a solid management arrangement. This allows each party to understand what the other requires in order to keep the relationship developing and beneficial.

Farmers and SSAA members have the potential to develop cooperative wildlife management operations through such plans. By joining forces, all parties can aim to manage introduced, native and game animals, as well as achieving other positive outcomes.

Sometimes compensation for land access is sought by landholders. Fee-for-access is one such arrangement, but the farmers may need to extend their own liability policy to cover receiving income from hunters on their land. To develop a more fulfilling relationship under the SSAA Farmer Assist program, members could offer to trade time or services if required to do so. Services could include those that have both commercial and/or environmental value such as property policing, monitoring and maintenance, and rehabilitation or revegetation work such as tree planting, fencing or weed removal.

Depending on individual circumstances, environmental work on the property could be the best option if required. Land improvement or rehabilitation work that helps prevent further vegetation decline, habitat loss and even soil erosion could be conducted by SSAA members. Such tasks are probably seen more as a 'chore' by most property owners and all these activities can improve the biodiversity value, soil retention and the overall economic viability of the farm. Members who become involved in land improvement works should generally see this as fair compensation for access to hunt.

When developing a plan, several factors should be considered when deciding the objectives and desired outcomes of a partnership. The farmer should take time to consider when and where the majority of wildlife impacts occur and what species are causing the problem. The farmer should also consider what level of management they require for a particular species. Some questions need to be asked: Is it local removal or simply a reduction in population to reduce impacts? When is the best time to put in maximum effort to achieve the maximum results? How often and how many hunters are required on the property at any one time? Taking time to discuss these factors helps the development of a simple plan and enables both farmers and SSAA members to decide the right course of action based on the aims and objectives of their own individualised plan.

The basic make-up of any plan needs to include a brief introduction describing the property, the management of the property, a list of permitted SSAA members, the responsibilities of all parties and the wildlife species that need to be managed. The next section of the plan should list existing problems encountered on the property. The objectives of wildlife management can be easily determined from the existing problems. A management strategy will outline all the management methods to be used to reduce the specific wildlife impacts on the property. This will include all hunting operations, such as spotlighting, plus trapping and poison bait-laying operations. The strategy should identify the time of the year and areas on the property where and when management is most needed.

One way to evaluate the effectiveness of any plan is to undertake simple harvest monitoring to help observe changes in wildlife populations. This can be done by hunters when they simply fill out data sheets after each activity to collect specific information. By keeping a record of the number of animals taken during actual hunting time, any decrease in the number of a specific species taken per hour over a period of time will indicate a decreasing population. This is known as the '*harvest per unit of effort*' method. With the information collected on the data sheets, all parties will be able to make decisions on the extent and intensity of management actions. This assists an adaptive management regime as densities of specific wildlife species reduce to acceptable levels.

This may result in a decision to continue with only hunting pressure for a period of time to maintain specific wildlife populations at acceptable levels. Property owners can also monitor impacts to evaluate the effectiveness of all management activities. Monitoring lamb survival rates is another way in which farmers can determine the effectiveness and impact of fox and wild dog management. Monitoring pasture grazing rates can also evaluate the impact of rabbit and macropod management.

The final section of any plan should lay down the rules of access. In this section, The Hunter's Code, property rules and licence and/or permit requirements can be listed. The farmer and SSAA members can develop their own Code of Conduct if they wish, which directly relates to acceptable behaviour while on the property. This could outline activities such as camping or the use of other types of accommodation on site, fishing (if available) and the use of campfires and collection of firewood. This section will also highlight the SSAA member's \$20 million liability insurance cover, which protects SSAA members for legal negligence while on both public and private property anywhere in Australia.

The following pages provide an example of a basic Property Based Wildlife Management Plan, which can be copied and completed by both farmers and SSAA members. A copy of the plan will be available online for downloading for all interested parties.

SSAA Farmer Assist Program

Property Based Wildlife Management Plan

All parties must recognise that this management plan is not a legally binding document. The owner or manager of the property reserves the right to withdraw permission to access and can cancel or alter any part of this management plan at any time and without notice.

Current and Approved Management Activities *(Please tick)*

- Use of poison
- Trapping
- Exclusion fencing
- Night-time hunting (spotlighting)
- Day-time hunting (various methods)
- Other non-lethal options: _____

Approved Firearm Types *(Please tick)*

- Shotgun
- Rimfire rifle
- Centrefire rifle
- Air rifle

Harvest or Off-take Monitoring

After each hunting activity, the number of pest animals seen and culled should be recorded. This can be done in a note book or using an App on a mobile device. Keeping record will enable you and/or landholder to monitor the success of operations over time.

Property Rules *(Camping locations, campfires, fishing etc allowed?)*

Activity Planning and Scheduling

To increase the efficiency of pest control on your property, you should consider a number of things. When is the best times to conduct activities (ie, around key events such a lambing), the required frequency of activities (regular, once off) and what activities that can be used together (complementary) to increase the effectiveness of control.

Use the space below to develop a plan of attack. You can use a seasonal approach (ie, what actions you can take in summer, spring, autumn and winter) or concentrate activities at specific key times (ie, around lambing season).

The Hunter's Code

- I will consider myself an invited guest of the landholder, seeking his or her permission, and so conducting myself that I may be welcome in the future.
- I will obey the rules of safe gun-handling and courteously but firmly insist that others who hunt with me do the same.
- I will obey all game laws and regulations and will insist that my companions do likewise.
- I will do my best to acquire those marksmanship and hunting skills which assure clean, sportsmanlike kills.
- I will support conservation efforts that can support sustainability for future generations of Australians.
- I will pass along the attitudes and skills essential to ensuring long-term sustainability of Australia's natural and cultural heritage.

The Ten Commandments of Safety

- Treat every gun with the respect due a loaded gun.
- Carry only empty guns, taken down or with the action open, into your car, camp and home.
- Always be sure that the barrel and action are clear of obstructions.
- Always carry your gun so that you can control the direction of the muzzle.
- Be sure of your target before you pull the trigger.
- Never point a gun at anything you do not want to shoot.
- Never leave your gun unattended unless you unload it first.
- Never climb a tree or a fence with a loaded gun.
- Never shoot at a flat, hard surface or the surface of water.
- Do not mix gunpowder and alcohol.

Licence and Permit Requirements

All members who undertake culling or hunting activities must hold the appropriate firearm licences and hunting permits (if applicable). These may be asked to be viewed prior to the commencement of any activities.

Any protected species to be controlled must have valid mitigation or destruction permits from appropriate agencies approving such activities.

Game species may be taken during a declared season if this activity has been approved by property owner or manager, and members must hold appropriate hunting permits (if applicable).

Acknowledgement of SSAA Member Insurance Cover

The SSAA provides its members with Public Liability and Personal Accident insurance cover to give property owners peace of mind and to protect members from legal negligence while hunting on both public and private property anywhere in Australia.

Property Manager and Member Signatures

The follow section enables all parties to accept the conditions of this plan as it stands.

I have read the above Property Based Wildlife Management Plan and approve all listed activities and conditions within the plan. I understand that I have the right to cancel, change or alter any part of the plan when needed, at any time and without explanation. I also understand that I can remove permission of access of any or all members named, at any time and without explanation. I only approve access to those members of the SSAA that have been listed and any others subject to prior notification of entry and approval. I understand that SSAA members are covered by the association's \$20 million liability insurance policy while undertaking activities on my property.

Farmer's Name: _____ Date: _____

Signature: _____

I/we have read the above Property Based Wildlife Management Plan and agree to abide by all conditions and property rules set out in the above plan. I/we will continue to support and promote the SSAA's role in ethical wildlife management and sustainable utilisation.
